1 Executive Summary

In review 2024 started with better winter performance in terms of delay and punctuality, however the situation deteriorated during the key summer season months, where notably July 2024 saw record en-route ATFM delays. The remainder of the year saw a more traditional trend with decreasing delays, less en-route delay however more airport weather delays as winter commenced.

The **average delay per flight in 2024 decreased slightly to 17.5 minutes per flight**, compared to 2023 where the average delay per flight was 17.6 minutes per flight alongside an **increase** in the **number of flights in ECAC** of **4.8**% when compared to 2023.

Despite the record summer delays **arrival punctuality in 2024 improved** in comparison to 2023, with **72.4% of flights arriving within 15 minutes** or earlier of their scheduled arrival time (STA), **compared to 70.6% in 2023.**

Reactionary (knock-on) delay remained the highest contributor to the average delay per flight with an identical share of 46% of delay minutes, translating to **8.0 minutes** per flight in 2024.

Airline related delay causes fell, those such as ramp handling, passenger boarding, staff shortage, (etc.) however this cause ranked in second place with **4.3 minutes per flight**.

The main shift in delay causation for the year was a **significant increase in en-route ATFM delays**, which increased to **2.3 minutes per flight** (of which **0.8 minutes was en-route weather), compared to 1.9 minutes** (of which 0.6 minutes was en-route weather) **in 2023**.

During the summer, en-route ATFM delays became a major driver of overall delays. In **July 2024, airlines recorded en-route ATFM delays of 5.7 minutes per flight, up from 3.3 minutes in July 2023.**

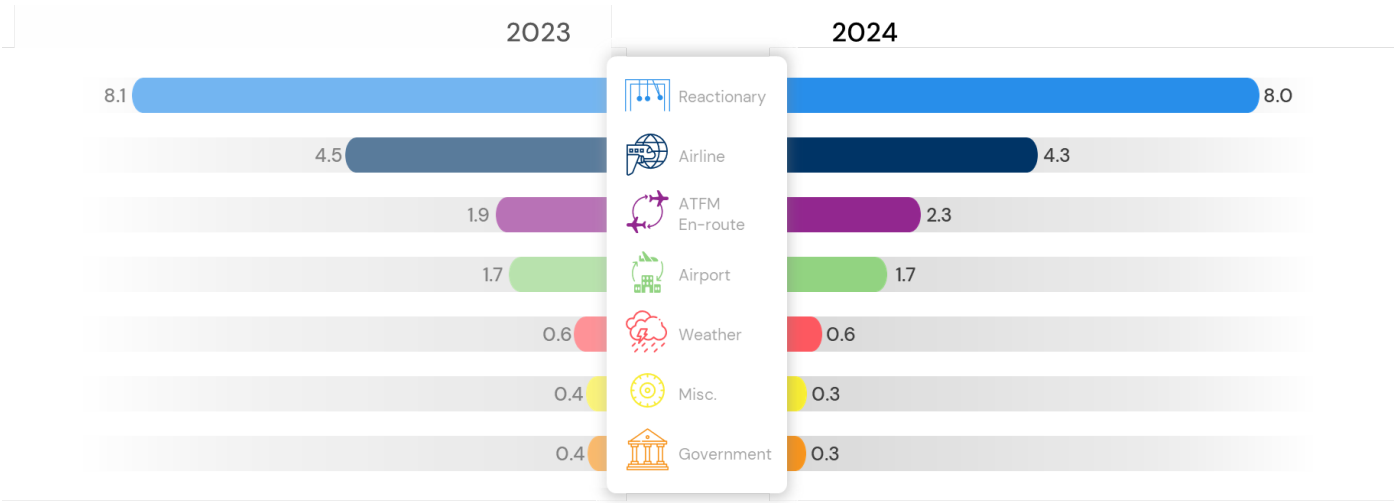

The **south-east axis experienced the steepest rise in ATFM delays**, driven by increased traffic and limited capacity. Nearly half of these ATFM delays were concentrated in Budapest ACC, Karlsruhe UAC and Zagreb ACCs.

Weather was the main driver of airport delays in 2024. London Heathrow frequently faced arrival restrictions, followed by Porto, Lisbon, and London Gatwick. Popular holiday destinations like Palma also experienced seasonal delays due to both weather (e.g. thunderstorms, winds) and limited aerodrome capacity.

Smaller airports in the **Greek islands**, especially Heraklion, saw significant delays linked to capacity constraints. Major hubs like **Amsterdam Schiphol** and **Lisbon** were affected by a mix of weather, ATC, and aerodrome capacity issues. Despite these operational challenges, **average airport delays remained stable** at 1.7 minutes per flight for the year.

ATC industrial action was less significant in 2024 than in 2023, where strikes affected nine months of the year, leading to delays, cancellations and disruption for passengers.

Figure 1. Breakdown of the Average Delay per Flight 2024 vs. 2023

2 Punctuality

In 2024, departure punctuality improved by 1.4 percentage points with 69.2% of flights departing within 15 minutes or earlier than their scheduled departure time, compared to 67.8% in 2023.

Figure 2: Departure Punctuality: 2024 vs 2023

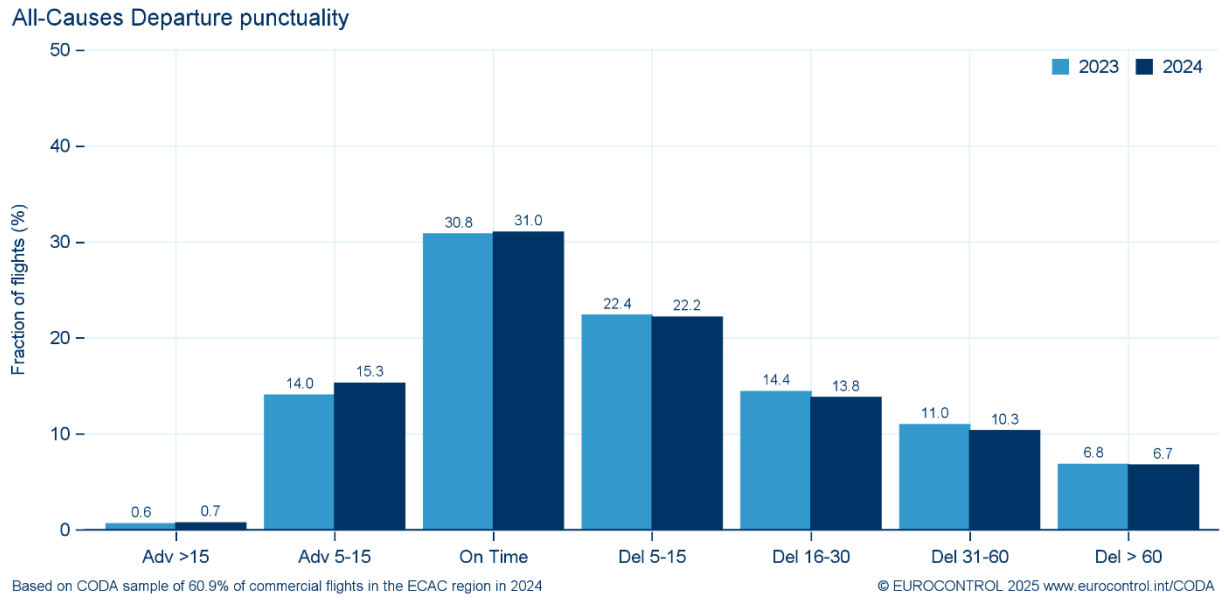

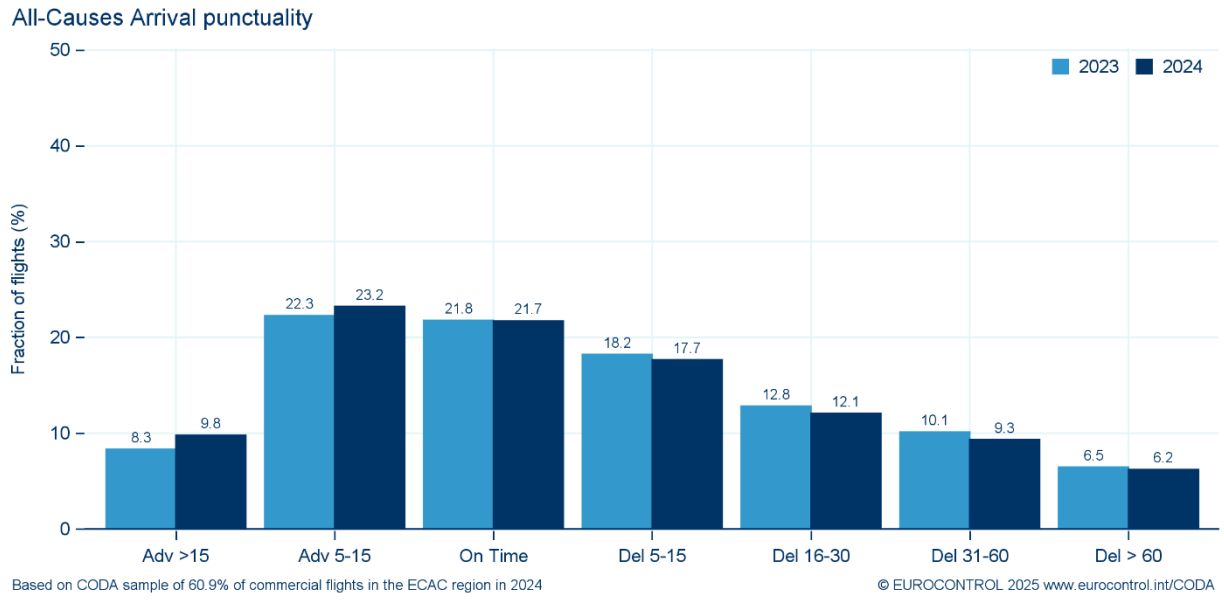

Figure 3. Arrival Punctuality: 2024 vs 2023

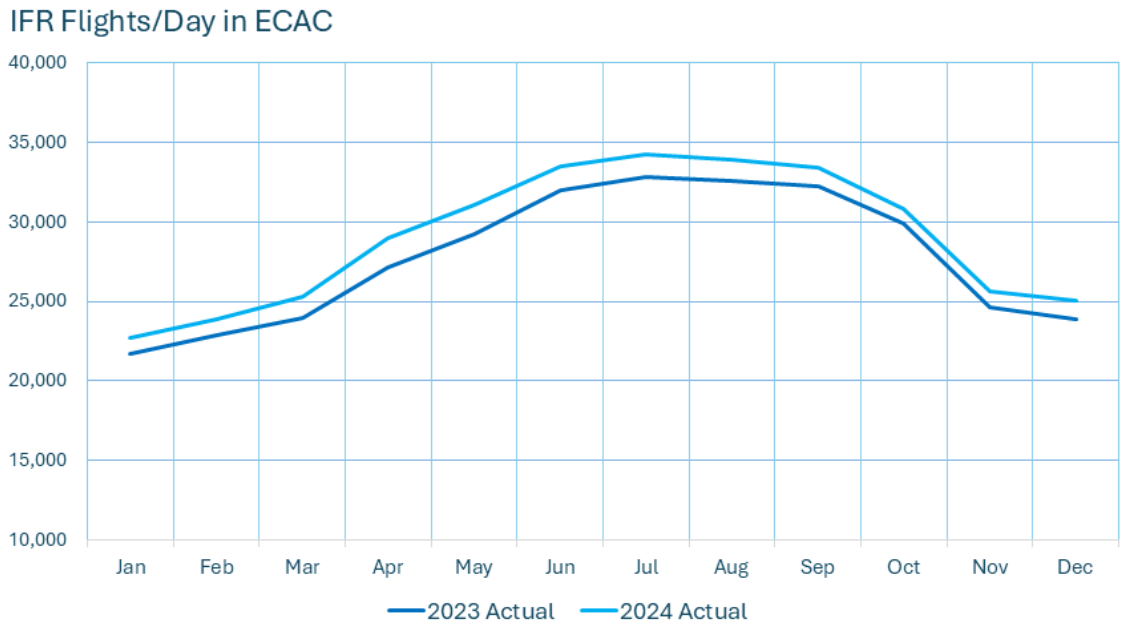

Arrival punctuality in 2024 also improved in comparison to 2023, with 72.4% of flights arriving within 15 minutes or earlier of their scheduled arrival time (STA), compared to 70.6% in 2023.

In 2024, nearly 10% of flights arrived more than 15 minutes early. While this can enhance the passenger experience, frequent early arrivals can disrupt airport operations by affecting stand availability and complicating air traffic flow management. To handle these shifts in demand, ATFM regulations may be required more often.

3 Traffic

Figure 4. Total Flights per Day in ECAC 2024 vs. 2023

European flights (ECAC) in average daily terms (Figure 4) increased by 4.8% when compared to 2023, but were still 4.1% lower than the records levels of 2019. Traffic continued to recover from COVID-19 pandemic, although the network was still strongly impacted by the Russian invasion in Ukraine and conflict in Israel.

Further information regarding traffic and forecasts is available at the Forecasting website, also via the STATFOR Interactive Dashboard (SID).

4 2024 Monthly Summary

Section 4 provides a month-by-month view for 2024 aims to provide context by highlighting the main causes of network delay, locations & disruptions in further detail.

January 2024. The average departure delay per flight was 13.6 minutes, which was an increase of 1.5 minutes when compared to January 2023.

Amsterdam Schiphol was affected by weather, predominantly on 15 January where snow caused high delays, regulations for strong winds were also recorded during the month. 4-flight trials influenced performance at Paris CDG throughout the month. Lisbon was also impacted by weather (mainly low visibility) and aerodrome capacity delays. Munich saw decreased levels of punctuality, driven by freezing rain on the 17 January which significantly disrupted operations. Istanbul Sabiha Gökçen suffered from weather delays (CBs, heavy rain and snow) notably on 02 & 07, 08 and 09 January. Oslo Gardermoen was affected by snow.

February 2024. The average departure delay per flight was 10.0 minutes, decreasing by 3.3 minutes per flight when compared to February 2023.

Weather mainly affected the airlines in February. Lisbon suffered from weather delays throughout the month, as well as aerodrome capacity. Istanbul Sabiha Gökçen saw delays due to weather, notably fog on 28 and 29 February, Paris Charles de Gaulle saw delays due to the 6-week trial of the 4-Flight system between 09 January and 14 February in Paris ACC. London Gatwick saw arrival delays due to weather (LVP and high winds).

March 2024. The average departure delay per flight was 11.1 minutes, a significant decrease of 5.4 minutes compared to March 2023 where the average delay per flight was 16.5 minutes.

Despite the fall in the average delay per flight weather continued to influence the network in March alongside en-route ATC capacity constraints. Flights at London Heathrow, London Gatwick, Amsterdam Schiphol and Lisbon airports were notably affected by strong winds and reduced visibility. Amsterdam Schiphol was also affected by WIP (closure of RWY 06/24).

April 2024. The average departure delay per flight was 12.6 minutes, a decrease of 2.5 minutes when compared to April 2023.

The main factors influencing delays in April 2024 were en-route ATC capacity and airport weather conditions. Flights were predominantly impacted by ATC capacity constraints at Karlsruhe UAC. Weather-related delays were recorded at London Heathrow Airport throughout the month. Additionally, an ATC strike in France on April 25 resulted in delays across French ACCs**.**

May 2024. The average departure delay per flight was 13.7 minutes, this decreasing by 1.8 minutes per flight when compared to May 2023.

Weather conditions and capacity/staffing issues continued to influence delays during May 2024. Convective activity and ATC capacity regulations in Karlsruhe UAC impacted flights throughout the month. London Heathrow saw high amounts of ATFM regulations due to weather throughout the month, there were also ATC staffing issues in Athens and Makedonia ACCs and daily aerodrome capacity related delays at Athens airport due to increasing seasonal demand.

June 2024. The average departure delay per flight was 22.4 minutes, an increase of 1.2 minutes compared to June 2023 where the average delay per flight was 21.2 minutes.

Convective activity in Karlsruhe UAC impacted flights throughout the month. Budapest ACC was also affected by weather issues and had high ATFM delay per flight. ATC capacity delays increased in Karlsruhe UAC and Budapest ACC due to capacity constraints in conjunction with military traffic and additional complexity.

Paris CDG saw delays from the French ATC industrial actions as well as weather. Rome Fiumicino saw flights impacted by a flight data exchange system outage and CPDLC issues. Copenhagen saw punctuality improve as fewer ATC staffing regulations were observed compared to last year. Barcelona suffered from poor weather (CB activity and heavy rain) during the month, with very high delays and disruption on 09, 10, 11 and 12 June. Antalya saw daily regulations for ATC and aerodrome capacity regulations. Palma airport saw significant disruption on 11 June when the airport suffered from flooding due to heavy rain.

July 2024. The average departure delay per flight was 27.7 minutes, a sharp increase of 2.7 minutes when compared to July 2023.

The main reasons for delays were airport weather conditions and en-route ATC capacity constraints. Antalya faced ATFM aerodrome capacity delays, Athens experienced almost daily ATFM arrival delays due to ATC capacity, Zurich was affected by capacity reductions at Skyguide due to the transition to a new ATM system. Gatwick’s traffic was impacted by weather (thunderstorms and low visibility) and aerodrome capacity delays throughout the month.

August 2024. The average departure delay per flight was 22.9 minutes, an increase of 0.5 minutes per flight when compared to August 2023.

ATC capacity issues and weather disruptions continued to impact airlines in August 2024. Weather regulations accounted for more than 40% of the total ATFM en-route delay minutes. Barcelona faced significant weather-related delays, while Athens struggled with daily ATC capacity restrictions, worsened by equipment failures on August 25. Rome Fiumicino and Munich ranked among the poorest performing airports compared to August 2023, while Lisbon and Istanbul/Sabiha Gokcen showed improvement.

September 2024. The average departure delay per flight was 20.8 minutes, a further increase compared to September 2023 where the average delay per flight was 18.7 minutes per flight.

Performance in terms of delays continued to suffer due to ATC capacity issues and adverse weather conditions. Barcelona experienced significant delays, due to thunderstorms and heavy rain. Weather also caused disruptions in the Balearics, with Palma. Vienna was affected by heavy rain and strong winds, leading to some days of single runway operations. Amsterdam Schiphol faced daily ATFM regulations due to high demand and weather-related delays. London Heathrow and Gatwick also experienced daily delays due to high winds and low visibility, with Gatwick further impacted by ATC staffing issues.

October 2024. The average departure delay per flight was 16.5 minutes, this decreasing by 0.4 minutes per flight when compared to October 2023.

Paris CDG, Frankfurt and London Gatwick were notably affected by weather-related disruptions, while Lisbon Airport saw delays due to aerodrome capacity. London Heathrow experienced frequent ATFM weather regulations, including low-visibility procedures (LVP), high winds, and forecasted storm activity.

November 2024. The average departure delay per flight was 12.9 minutes, decreasing by 0.3 minutes per flight when compared to November 2023.

While performance improved across the network, seasonal weather conditions, such as low visibility, snow, and heavy rain, caused disruptions. Barcelona was impacted by flooding on 03-04 November and Paris CDG faced snow delays on 21 November. Frankfurt experienced delays due to runway closures and low visibility. Amsterdam Schiphol dealt with snow, ice, and capacity issues, particularly on 22 November. Storm Bert caused delays at London Heathrow on 23-24 November.

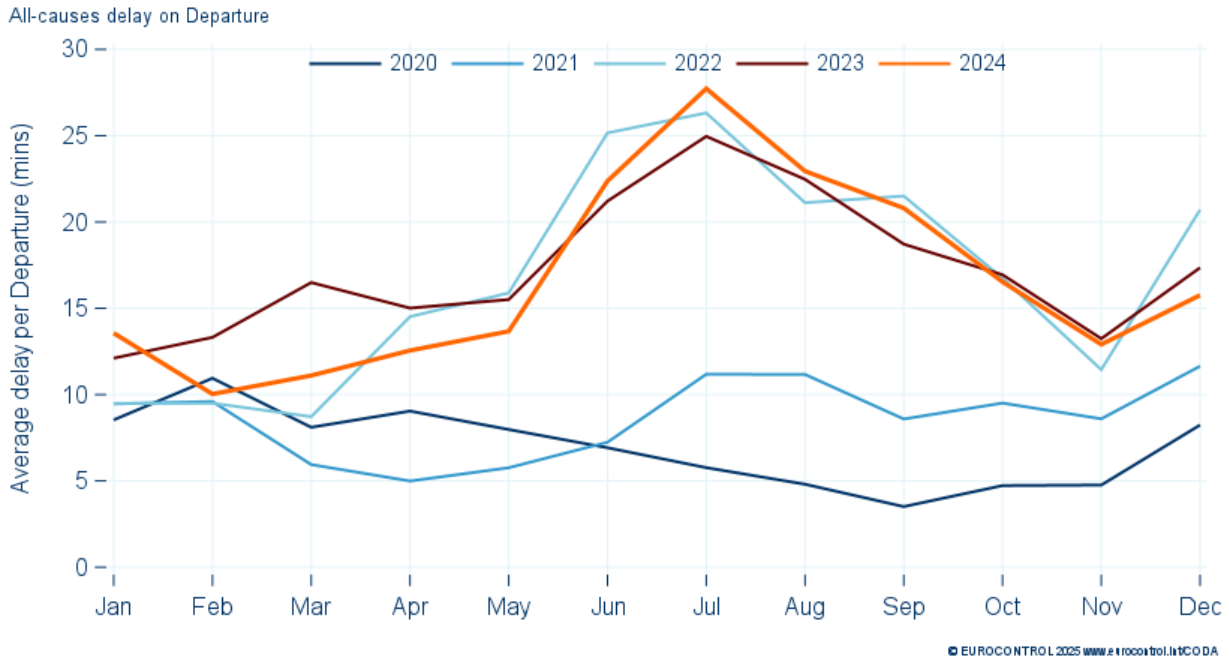

December 2024. The average departure delay per flight was 15.8 minutes, this decreased by 1.6 minutes per flight when compared to December 2023.

Seasonal weather disruptions continued throughout the month, with London airports particularly affected by low visibility on December 27, 28, and 29. Amsterdam Schiphol faced near-daily weather-related challenges, including high winds, low visibility and arrival capacity issues. Frankfurt Airport dealt with freezing fog on December 1, along with tower radio frequency issues that caused additional disruptions during the month. In contrast, Istanbul airports experienced fewer weather-related disruptions, leading to better performance compared to December 2023.

5 Average Delay per Flight (Departure)

The average departure delay per flight decreased slightly to 17.5 minutes, down from 17.6 minutes in 2023. In comparison to 2023 were lower at the start of the year, however the summer months saw increasing levels of delay with July 2024 seeing the highest delays in the last 5 years, with a very high contribution of en-route ATFM delay at 5.7 minutes per flight.

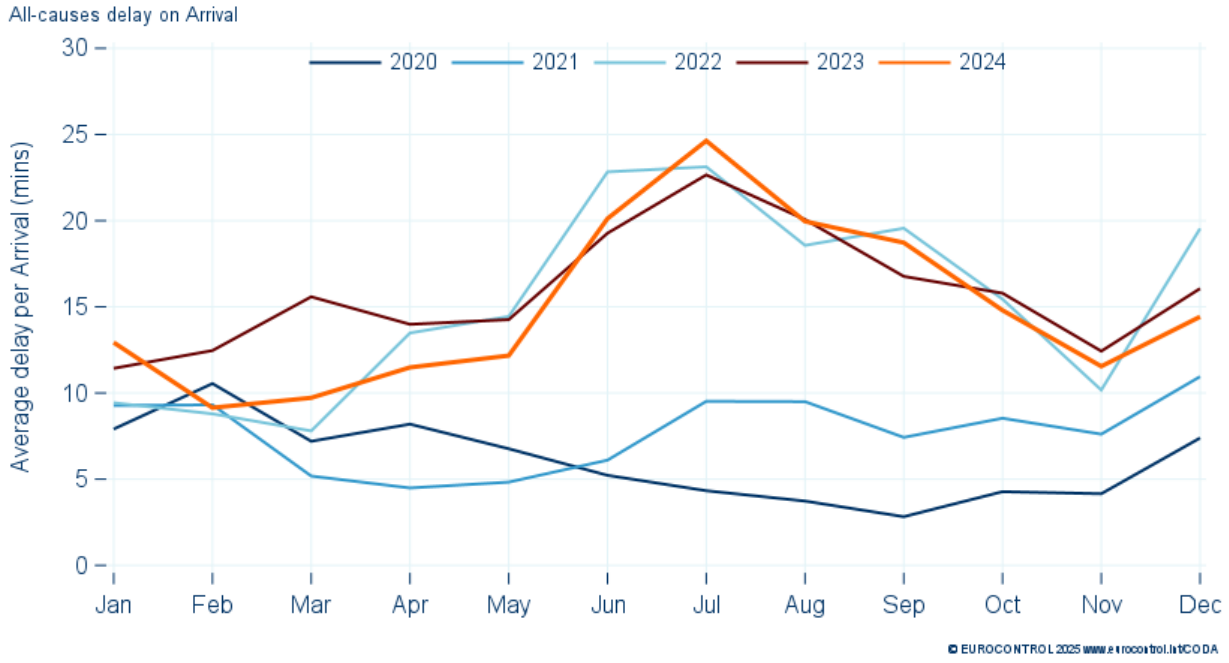

Figure 5. Average Delay per Flight (All-Causes) for Departures

6 Average Delay per Flight (Arrival)

The average delay per flight on arrival (Figure 6) shows a similar trend to that of the departure delay, albeit at slightly lower levels of delay as airline scheduling techniques may see some departure delay absorbed by the schedule, thus in 2024 the average arrival delay per flight was 15.5 minutes per flight.

Figure 6. Average Delay per Flight (All-Causes) for Arrivals

7 Scheduling Indicators

Scheduling correctly is a difficult art: if too long a time is blocked for a flight, the airline will not be able to make best use of resources - staff, airframes, infrastructure. Too short a time can arguably be worse as late flights generate rotational (knock-on) delay with late incoming aircraft and passengers from previous flights having to be accommodated. When flights leave on time but arrive after the scheduled time of arrival, they cause reactionary delays. Schedule padding is essential for air carriers to find schedules, which work with the typical patterns of delay, so that they can deliver passengers on time, and get maximum use out of their aircraft. Consequently, when delays decrease it takes one or two (IATA) seasons for the airline to adapt its schedule accordingly.

Two CODA scheduling indicators help airline schedulers determine the optimal schedule based on historical flight data:

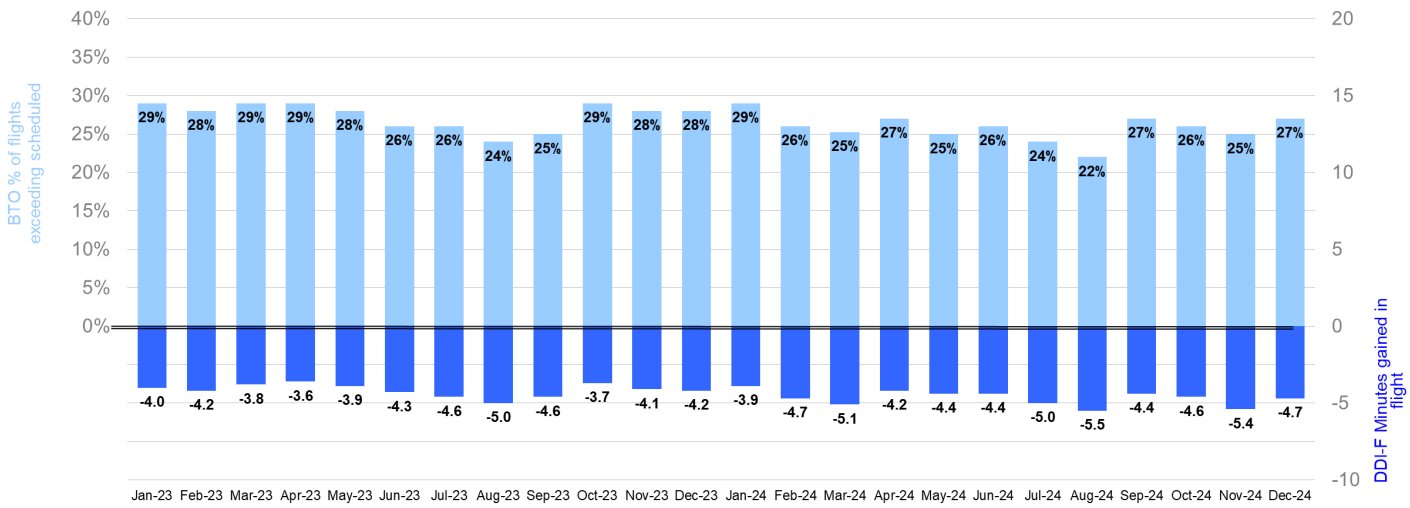

The Delay Difference Indicator - Flight (DDI-F) or departure delay recovery is the difference between departure and arrival punctuality expressed in minutes. This can be indicated as a positive or negative figure, for example, a flight departing with 20 minutes delay and arriving with 30 minutes arrival delay will have a DDI-F of +10 minutes.

The **European DDI-F in 2023 was -4.7 minutes**, this this **an increase in comparison to 2023** where the DDI-F was -4.2 minutes.

The **Block Time Overshoot (BTO)** is the percentage of flights with an actual block time that exceeds the scheduled block time. The **European BTO in 2024 decreased** to 25.6% compared to 27.4% in 2023. This 1.8 p.p. difference shows that it was **taking less time than planned to complete flights**.

In summary, given the increased delay in the network the changes in the BTO and DDI-F indicate that airlines have **added buffer to their schedules** to absorb potential disruption (knock-on delays).

Figure 7. Block Time Overshoot (BTO) and Delay Difference Indicator - Flight (DDI-F) Jan 2023 – Dec 2024

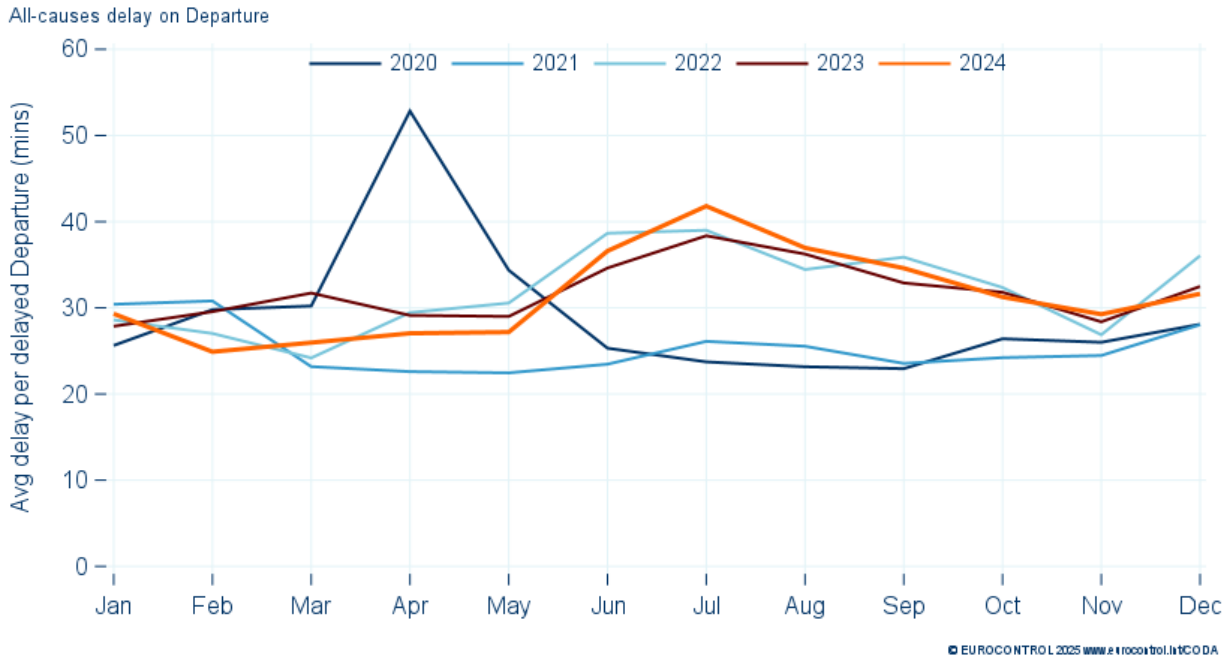

8 Year-on-Year Trends in All-Causes Indicators

This section summarises the year-on-year trends in the main indicators of delay from all-causes. Here flights are considered delayed from 5 minutes. Note: High delays in April 2020 were due to start of the COVID-19 pandemic.

The long-term performance trends can be observed in Figures 8, 9 and 10. In 2024, the average delay per delayed flight on departure (ADDD) was 34.2 minutes per flight, this was the same in 2023, with 34.2 minutes per flight.

Figure 8. Average all-causes delay per delayed flight ≥ 5 mins (departures top, arrivals bottom)

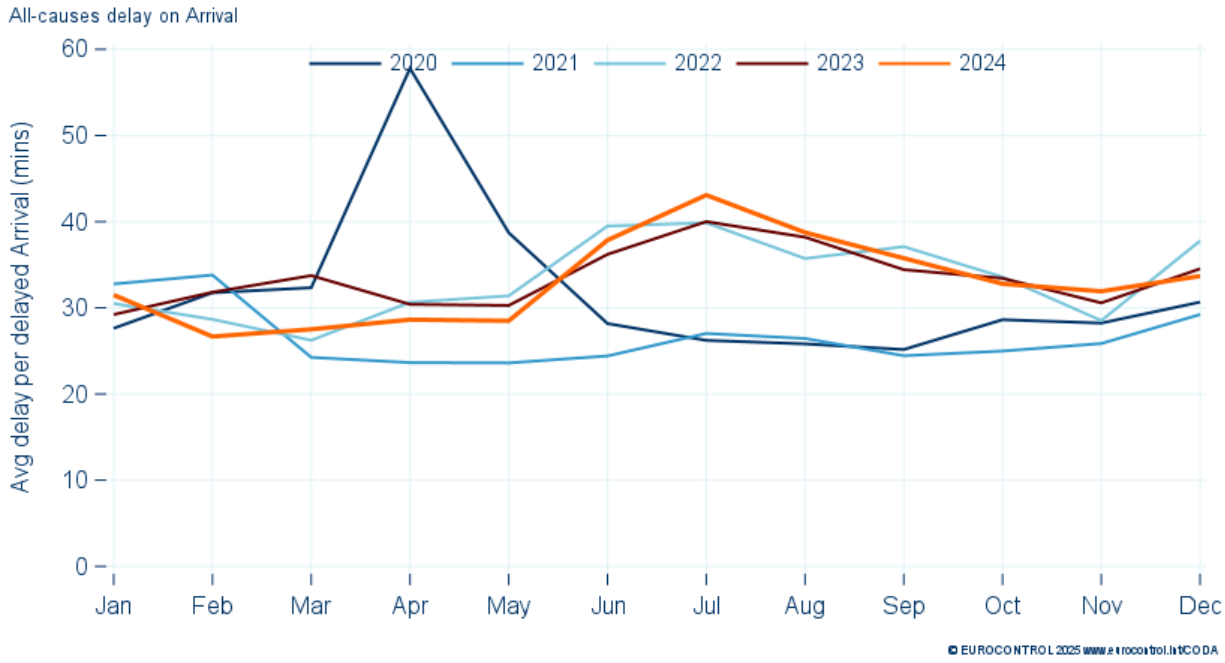

Figure 9. Percentage of flights delayed ≥ 5 mins for all-causes delay (departures top, arrivals bottom)

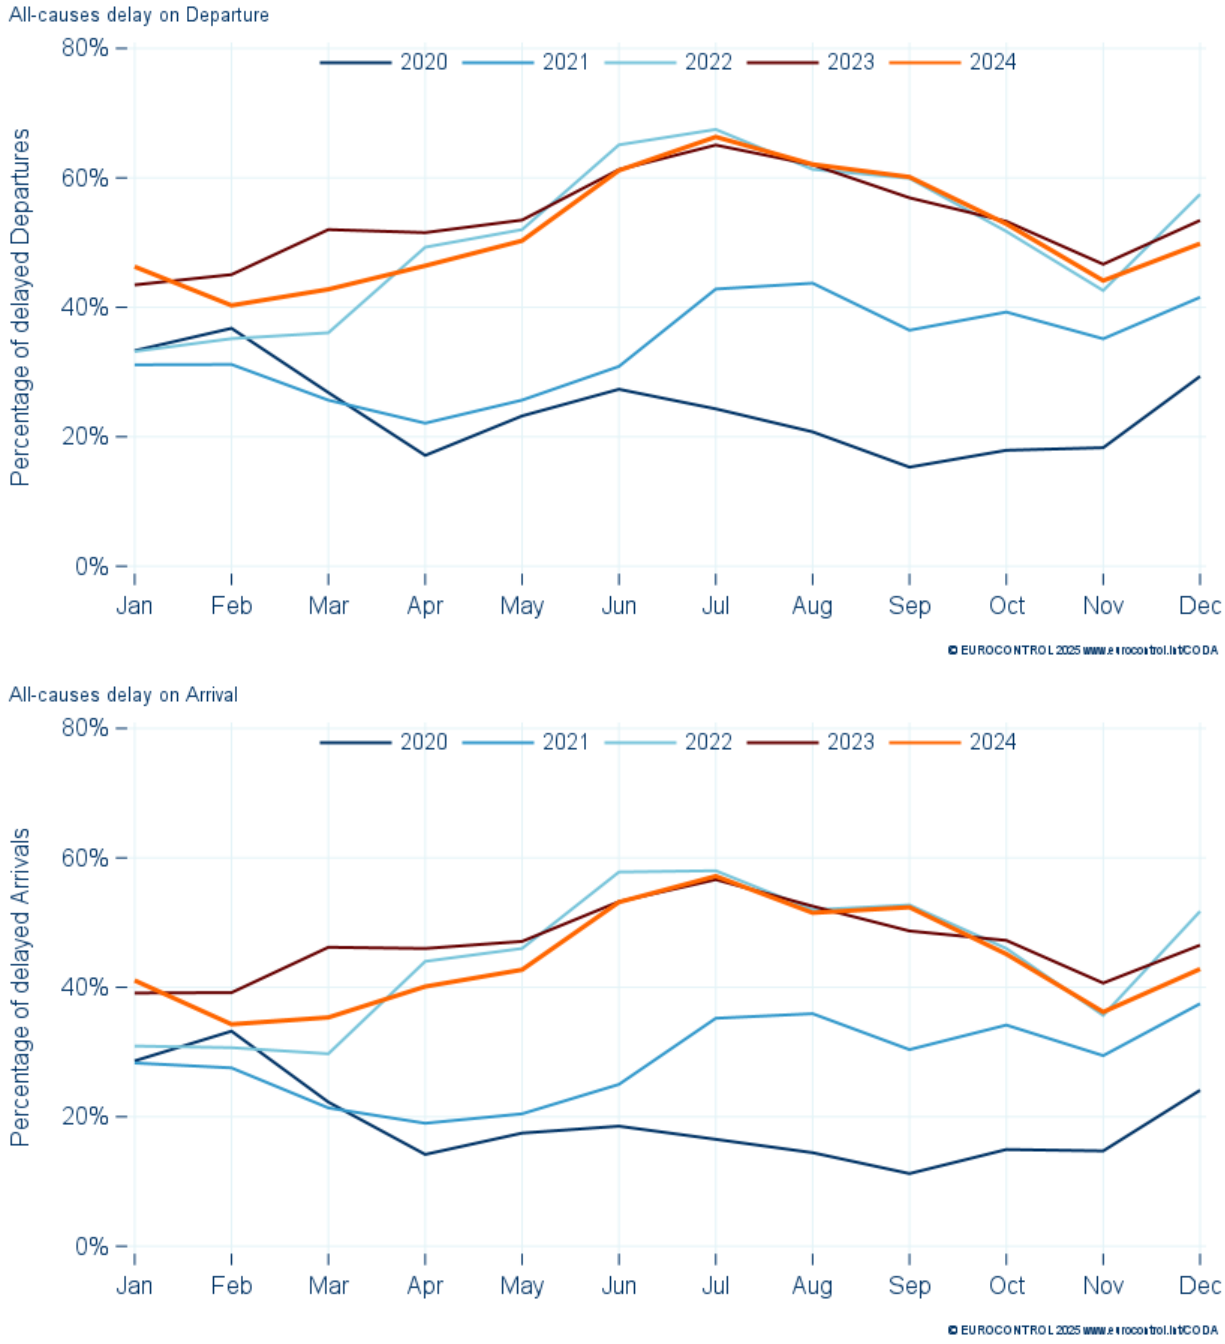

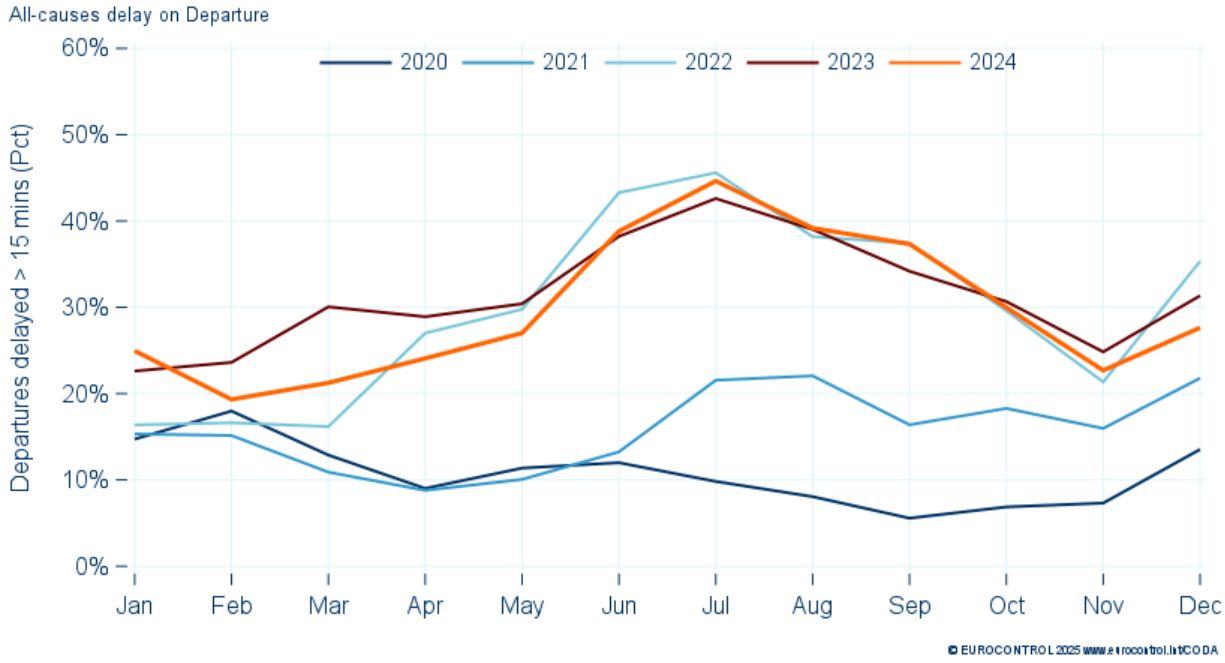

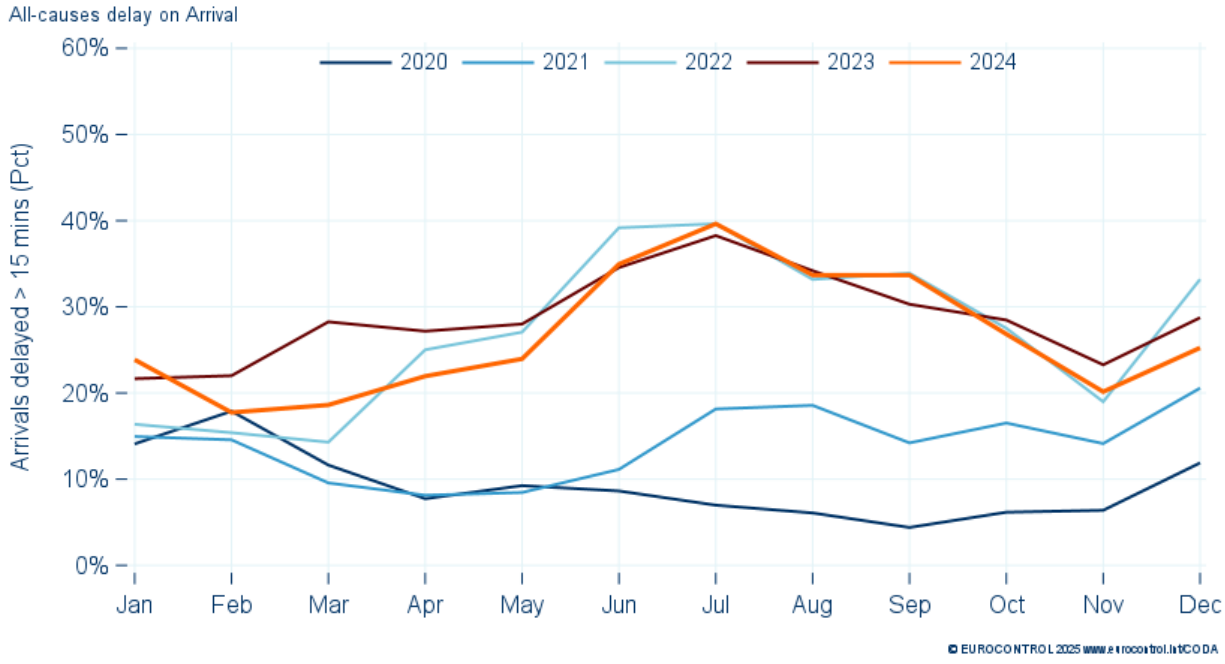

Figure 10. Percentage of flights delayed >15mins for all-causes (departures top, arrivals bottom)

9 Annex Standard IATA Delay Codes (AHM 730)

Others

00-05 AIRLINE INTERNAL CODES
06 (OA) NO GATE STAND AVAILABILITY DUE TO OWN AIRLINE ACTIVITY Including Early Arrivals
09 (SG) SCHEDULED GROUND TIME LESS THAN DECLARED MINIMUM GROUND TIME

Passenger and Baggage

11 (PD) LATE CHECK-IN, acceptance after deadline
12 (PL) LATE CHECK-IN, congestions in check-in area
13 (PE) CHECK-IN ERROR, passenger and baggage
14 (PO) OVERSALES, booking errors
15 (PH) BOARDING, discrepancies and paging, missing checked-in passenger
16 (PS) COMMERCIAL PUBLICITY PASSENGER CONVENIENCE, VIP, press, ground meals and missing personal items
17 (PC) CATERING ORDER, late or incorrect order given to supplier
18 (PB) BAGGAGE PROCESSING, sorting etc.
19 (PW) REDUCED MOBILITY, boarding deboarding of passengers with reduced mobility.

Cargo and Mail

21 (CD) DOCUMENTATION, errors etc.
22 (CP) LATE POSITIONING
23 (CC) LATE ACCEPTANCE
24 (CI) INADEQUATE PACKING
25 (CO) OVERSALES, booking errors
26 (CU) LATE PREPARATION IN WAREHOUSE
27 (CE) DOCUMENTATION, PACKING etc *(Mail Only)*
28 (CL) LATE POSITIONING *(Mail Only)*
29 (CA) LATE ACCEPTANCE *(Mail Only)*

Aircraft and Ramp Handling

31 (GD) AIRCRAFT DOCUMENTATION LATE INACCURATE, weight and balance, general declaration, pax manifest, etc.
32 (GL) LOADING UNLOADING, bulky, special load, cabin load, lack of loading staff
33 (GE) LOADING EQUIPMENT, lack of or breakdown, e.g. container pallet loader, lack of staff
34 (GS) SERVICING EQUIPMENT, lack of or breakdown, lack of staff, e.g. steps
35 (GC) AIRCRAFT CLEANING
36 (GF) FUELLING DEFUELLING, fuel supplier
37 (GB) CATERING, late delivery or loading
38 (GU) ULD, lack of or serviceability
39 (GT) TECHNICAL EQUIPMENT, lack of or breakdown, lack of staff, e.g. pushback

Technical and Aircraft Equipment

41 (TD) AIRCRAFT DEFECTS.
42 (TM) SCHEDULED MAINTENANCE, late release.
43 (TN) NON-SCHEDULED MAINTENANCE, special checks and or additional works beyond normal maintenance schedule.
44 (TS) SPARES AND MAINTENANCE EQUIPMENT, lack of or breakdown.
45 (TA) AOG SPARES, to be carried to another station.
46 (TC) AIRCRAFT CHANGE, for technical reasons.
47 (TL) STAND-BY AIRCRAFT, lack of planned stand-by aircraft for technical reasons.
48 (TV) SCHEDULED CABIN CONFIGURATION VERSION ADJUSTMENTS.

Damage to Aircraft & EDP Automated Equipment Failure

51 (DF) DAMAGE DURING FLIGHT OPERATIONS, bird or lightning strike, turbulence, heavy or overweight landing, collision during taxiing
52 (DG) DAMAGE DURING GROUND OPERATIONS, collisions (other than during taxiing), loading off-loading damage, contamination, towing, extreme weather conditions
55 (ED) DEPARTURE CONTROL
56 (EC) CARGO PREPARATION DOCUMENTATION
57 (EF) FLIGHT PLANS
58 (EO) OTHER AUTOMATED SYSTEM

Flight Operations and Crewing

61 (FP) FLIGHT PLAN, late completion or change of, flight documentation
62 (FF) OPERATIONAL REQUIREMENTS, fuel, load alteration
63 (FT) LATE CREW BOARDING OR DEPARTURE PROCEDURES, other than connection and standby (flight deck or entire crew)
64 (FS) FLIGHT DECK CREW SHORTAGE, sickness, awaiting standby, flight time limitations, crew meals, valid visa, health documents, etc.
65 (FR) FLIGHT DECK CREW SPECIAL REQUEST, not within operational requirements
66 (FL) LATE CABIN CREW BOARDING OR DEPARTURE PROCEDURES, other than connection and standby
67 (FC) CABIN CREW SHORTAGE, sickness, awaiting standby, flight time limitations, crew meals, valid visa, health documents, etc.
68 (FA) CABIN CREW ERROR OR SPECIAL REQUEST, not within operational requirements
69 (FB) CAPTAIN REQUEST FOR SECURITY CHECK, extraordinary

Weather

71 (WO) DEPARTURE STATION
72 (WT) DESTINATION STATION
73 (WR) EN ROUTE OR ALTERNATE
75 (WI) DE-ICING OF AIRCRAFT, removal of ice and or snow, frost prevention excluding unserviceability of equipment
76 (WS) REMOVAL OF SNOW, ICE, WATER AND SAND FROM AIRPORT
77 (WG) GROUND HANDLING IMPAIRED BY ADVERSE WEATHER CONDITIONS

Air Traffic Flow Management Restrictions

81 (AT) ATFM due to ATC EN-ROUTE DEMAND CAPACITY, standard demand capacity problems
82 (AX) ATFM due to ATC STAFF EQUIPMENT EN-ROUTE, reduced capacity caused by industrial action or staff shortage, equipment failure, military exercise or extraordinary demand due to capacity reduction in neighbouring area
83 (AE) ATFM due to RESTRICTION AT DESTINATION AIRPORT, airport and or runway closed due to obstruction, industrial action, staff shortage, political unrest, noise abatement, night curfew, special flights
84 (AW) ATFM due to WEATHER AT DESTINATION

Airport and Government Authorities

85 (AS) MANDATORY SECURITY
86 (AG) IMMIGRATION, CUSTOMS, HEALTH
87 (AF) AIRPORT FACILITIES, parking stands, ramp congestion, lighting, buildings, gate limitations, etc.
88 (AD) RESTRICTIONS AT AIRPORT OF DESTINATION, airport and or runway closed due to obstruction, industrial action, staff shortage, political unrest, noise abatement, night curfew, special flights

89 (AM) RESTRICTIONS AT AIRPORT OF DEPARTURE WITH OR WITHOUT ATFM RESTRICTIONS, including Air Traffic Services, start-up and pushback, airport and or runway closed due to obstruction or weather[1], industrial action, staff shortage, political unrest, noise abatement, night curfew, special flights

Reactionary

91 (RL) LOAD CONNECTION, awaiting load from another flight
92 (RT) THROUGH CHECK-IN ERROR, passenger and baggage
93 (RA) AIRCRAFT ROTATION, late arrival of aircraft from another flight or previous sector
94 (RS) CABIN CREW ROTATION, awaiting cabin crew from another flight
95 (RC) CREW ROTATION, awaiting crew from another flight (flight deck or entire crew)
96 (RO) OPERATIONS CONTROL, re-routing, diversion, consolidation, aircraft change for reasons other than technical

Miscellaneous

97 (MI) INDUSTRIAL ACTION WITH OWN AIRLINE
98 (MO) INDUSTRIAL ACTION OUTSIDE OWN AIRLINE, excluding ATS
99 (MX) OTHER REASON, not matching any code above

SOURCE: IATA – Airport Handling Manual (730 & 731)

Standard IATA Delay Code Sub-Codes (AHM 731)

73 (WR) WEATHER: EN ROUTE OR ALTERNATE
